

CHAPTER-3

Decision making statement

- ❖ If statement
- ❖ If else statement
- ❖ Else If ladder
- ❖ Switch case
- ❖ Nested If

If statement

decision-making statement. It checks a condition and executes a block of code only if the condition is true.

Syntax:

```
if (condition) {  
    // code to execute if the condition is true  
}
```

Example

```
int age = 20;  
if (age >= 18) {  
    System.out.println("You are eligible to vote.");  
}
```

Else If statement

used to check multiple conditions. If the first if condition is false, Java checks the else if condition. You can use multiple else if blocks to test different conditions.

Syntax

```
if (condition1) {  
    // Executes if condition1 is true  
} else if (condition2) {  
    // Executes if condition2 is true  
} else {
```

```
    // Executes if none of the above conditions are true  
}
```

Else If ladder

series of if and else if statements used to check multiple conditions one after another.

If none of the conditions are true, the else block (if present) is executed.

Syntax

```
if (condition1) {  
    // Executes if condition1 is true  
} else if (condition2) {  
    // Executes if condition2 is true  
} else if (condition3) {  
    // Executes if condition3 is true  
} else {  
    // Executes if none of the above conditions are true  
}
```
